Syntax Brings ContentKeeper Solutions to India

Tuesday, January 9th, 2007

India

Enterprise software and services provider, Syntax Soft-Tech India will sell ContentKeeper Technologies' Internet content filtering software applications in the Indian market.

The two companies recently signed an agreement under which Syntax will engage in marketing and distribution activities for ContentKeeper's solutions in the country.

ContentKeeper offers specialized software that allow organizations to monitor, manage and control employee access to the Internet. These offerings enable businesses to develop and enforce their own Internet acceptable use policies and controls access in ways including site, site categories, file types, media type, users, groups, network addresses, and time of day.

ContentKeeper's software has an in-built engine which reports new websites in real time. It also features a site control list (with hourly updates) which restricts users from accessing websites that are prohibited by the company policy. It can be delivered as installable software or even as an appliance.

The two company's view India as a fast emerging market for the software, as the internet and broadband penetration continues to grow in the country and more and more businesses rely on the net for their daily business operations.

About ContentKeeper Web

ContentKeeper Web provides revolutionary technology that allows it's users to Monitor, Manage, Control and Secure access to the Internet and enforce the Acceptable Usage policies developed by the user themselves.

Closed Loop Collaborative Filtering™ is ContentKeeper Technologies exclusive closed circuit system designed to collect, analyse, categorise, edit and distribute web site URL's worldwide. It is this unique technology that provides the basis for our award winning product. With additional features such as the ease of implementation, ease of use, with simple point and click policy maintenance and multiple report format options ContentKeeper Web will maintain our position as a leader in innovation in the Internet security industry.

ContentKeeper is supplied as an appliance device, and is designed to fit easily and transparently into all network environments, including ISPs. The design of ContentKeeper's standalone system removes filtering load from the proxy server or firewall, increasing speed, reliability and security, and eliminating latency from the network. ContentKeeper Web is completely scalable and has the flexibility to suit all systems, in large and small organisations in all sectors.

ContentKeeper Technologies has a range of Internet security products available in addition to ContentKeeper Web. Please visit our website for more information www.contentkeeper.com.
