ContentKeeper and F-Secure Is A Powerful Combination

F-Secure have just been positioned in the “Visionaries Quadrant” of Gartner Inc’s Enterprise Antivirus Magic Quadrant. The key characteristic required to be positioned in the quadrant is that visionaries must “invest in the leading/”bleeding”-edge features that will be significant in the next generation of products and will give buyers early access to improved security and management.” Gartner is a respected and independent IT Consultancy who “delivers technology related insight necessary for clients to make the right decisions, every day”.

F-Secure’s supreme antivirus is leveraged in ContentKeeper Technology’s Web Filtering solution. The technologies combine to make the most secure Web Filtering solution in the world.

About ContentKeeper Web

ContentKeeper Technologies is an Australian based company. The solution provides the ability to consistently enforce Acceptable Internet Use Policies and enables organisations to increase workplace productivity, reduce Internet bandwidth costs and minimise legal liability.

Closed Loop Collaborative Filtering™ is ContentKeeper’s exclusive closed circuit system designed to collect, analyse, categorise, edit and distribute web site URLs worldwide. It is this unique technology that provides the basis for the award winning product. Other features, such as ease of implementation, simple point and click policy maintenance and multiple report formats add to the overall appeal of the product.

ContentKeeper is supplied as an appliance device, and is designed to fit easily and transparently into all network environments. The design of ContentKeeper's stand alone system removes filtering load from the proxy server or firewall, increasing speed, reliability and security. Due to its flexibility, ContentKeeper is deployed in large and small organisations in all sectors, public or private, educational or corporate.
