## **PRESS RELEASE**

### **IT Firm Top Achiever in Canberra Business Council's Annual Business Achievement Award**

Canberra IT firm ContentKeeper Technologies, which pioneers and markets revolutionary IT security software, was named business achiever of the year at the annual Canberra Business Council business achievement success series awards last night.

The Business Achievement Award is designed to encourage and recognise businesses which demonstrate excellence in their respective fields and make a positive contribution to the ACT economy.

ContentKeeper provides revolutionary technology that allows organisations to manage their Internet usage. The technology allows users to monitor, manage, control and secure access to the Internet and enforce acceptable usage policies developed by the user themselves.

From the beginning of the development of its web filtering product range in 1998, the company has grown to become an internationally acclaimed company with markets throughout south-east Asia and the UK, and more recently, India.

Accepting the award last night, CEO Geoff Wood, congratulated all the finalists as being leaders in their field, emphasising that the ContentKeeper success had been a team effort

"I am honoured to accept this on behalf of the whole team, as the award is recognition of a team effort and our dedication to delivering the best Internet filtering solution in the world," he said.

"The success of the ContentKeeper solution in some very challenging markets is testament to the quality and functionality of the ContentKeeper developers."

The award ranks businesses on their product innovation, business growth and exporting opportunities, and diversification to the ACT business base. ContentKeeper Technologies unique product suite, successful export achievements and now well established position within the ACT saw it meet this year's winning criteria.

#### **About ContentKeeper Web:**

Closed Loop Collaborative Filtering™ is ContentKeeper Technologies exclusive closed circuit system designed to collect, analyse, categorise, edit and distribute web site URL's worldwide. It is this unique technology that provides the basis for our award winning product. With additional features such as the ease of implementation,

ease of use, with simple point and click policy maintenance and multiple report format options ContentKeeper Web will maintain our position as a leader in innovation in the Internet security industry.

ContentKeeper is supplied as an appliance device, and is designed to fit easily and transparently into all network environments, including ISPs. The design of ContentKeeper's standalone system removes filtering load from the proxy server or firewall, increasing speed, reliability and security, and eliminating latency from the network. ContentKeeper Web is completely scalable and has the flexibility to suit all systems, in large and small organisations in all sectors.

ContentKeeper Technologies has a range of Internet security products available in addition to ContentKeeper Web. Please visit our website for more information [www.contentkeeper.com](http://www.contentkeeper.com).
