PRESS RELEASE

ContentKeeper selected for ACT Export Awards

Thursday, the ACT Chief Minister, Jon Stanhope, awarded ContentKeeper Technologies the ACT Export Award for the Information and Communications Technology category. The company will now go on to compete in the National Export Awards to be held on November 22nd in Brisbane.

The award reflects the rapid growth which ContentKeeper has achieved since its establishment in 1999. "It's an honour that ContentKeeper has been recognised by the ACT for our international achievements. We pride ourselves in being a Canberra based company that has global-reach into 51 countries" says CEO Geoff Wood. "And we have plans for further expansion into the Asia Pacific and American regions".

In less than 10 years, ContentKeeper has attained a highly respected reputation for providing innovative Internet content filtering solutions that are scalable, flexible and reliable. "With the frenetic pace of today's Internet, it is essential that organisations safeguard themselves, not only from Spyware, Malware, bots and viruses, but also safeguard themselves from falling productivity through staff accessing websites such as Facebook or even pornography at work".

In response to the exponential growth of websites and domains, ContentKeeper's Closed Loop Collaborative Filtering technology has the unique attribute of providing hourly updates for its Control List. This, along with ContentKeeper's real-time AI classification technology and recently developed Secure Socket Layer (SSL) technology provides a solution combining Internet security with Internet filtering.

ContentKeeper has offices or representation in the UK, Thailand, USA, with new offices planned for India, Hong Kong, Singapore and South Africa this financial year. "The global customer acceptance of the fully Australian owned and manufactured Internet filtering solution has been remarkable, delivered through the strength of the local talent, expertise and skills. The Canberra talent pool is world class."

About ContentKeeper Web

ContentKeeper Web provides revolutionary technology that allows it's users to Monitor, Manage, Control and Secure access to the Internet and enforce the Acceptable Usage policies developed by the user themselves.

Closed Loop Collaborative Filtering™ is ContentKeeper Technologies exclusive closed circuit system designed to collect, analyse, categorise, edit and distribute web site URL's worldwide. It is this unique technology that provides the basis for our award winning product. With features such as the ease of implementation, ease of use, with simple point and click policy maintenance and multiple report format options ContentKeeper Web maintains its position as a leader in innovation in the Internet security industry.

ContentKeeper is supplied as an appliance device, and is designed to fit easily and transparently into all network environments, including ISPs. The design of ContentKeeper's standalone system removes filtering load from the proxy server or firewall, increasing speed, reliability and security, and eliminating latency from the network. ContentKeeper Web is completely scalable and has the flexibility to suit all systems, in large and small organisations in all sectors.

ContentKeeper Technologies has a range of Internet security products available in addition to ContentKeeper Web. Please visit our website for more information www.contentkeeper.com.
