# ContentKeeper Mail

Powerful, flexible, simple.

## DATASHEET

ContentKeeper Mail is an in-the-cloud email security service that resides outside your network. It requires no additional hardware, software, or personnel resources to manage daily email security operations.

### Why CK-Mail?

Unwanted email currently accounts for between 60-90% of daily Internet traffic. The sheer volume of unwelcome mail in an overwhelming drain on time, effort and resources. CK-Mail delivers:

- Dynamic virus and spam filters to protect against 99% of email spam and 100% of known viruses.
- Content filtering and data archiving capabilities to prevent data loss and help fulfil compliance and data storage requirements.
- No costly hardware or equipment maintenance fees, and quick and easy setup and installation.

### Proactive Protection

#### Spam, Phishing & Virus Protection—preventative measures.

ContentKeeper Mail effectively eliminates over 98% of spam email with less than 1 in 300,000 false positives. With 6 levels of Spam Control, 5 best of breed identity-based antivirus engines, constantly updated spam and virus definitions, and zero-hour and heuristic virus filters, your organization will be thoroughly protected from spam, phishing attempts and malicious content such as viruses.

## Key Features

### Security.

- Anti-Virus
- Anti-spam
- Anti-phishing
- Encryption
- Content Control
- Image Filtering

### Effective and Reliable.

Protects against 99% of spam and 100% of known viruses.

### Cost Effective.

- No hardware or software installation or maintenance
- Predictable, low risk operating costs.

### Fast, easy implementation.

- Fast, low-risk deployment
- No user disruption
- Deployment usually completed within 1-4 days.

### Save time and resources.

- Integrated suite of email protection management and compliance services.
- No training or in-house expertise required.

### Real-time Reporting.

- On-demand, customizable reports demonstrate effectiveness and ROI
- Query anytime
- Web-based administration panel and summary dashboard offers total visibility, control and flexibility

## Business Continuity

Most Business Continuity solutions only activate when a disaster occurs.

ContentKeeper Mail ensures that off-site resources are constantly active during normal operation as well as when a fault occurs. It includes:

- 28 days of inbound and outbound email from secure, mirrored data stores available to end users via webmail.
- This allows users to send and receive email from any browser worldwide, ensuring important communication is not lost during a crisis

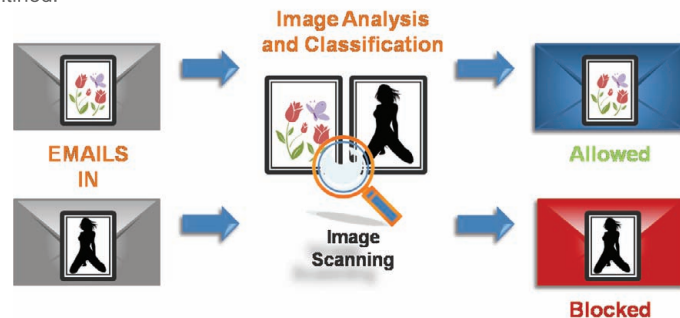

## Archiving

A core element of any Business Continuity solution is Archiving. Archiving enables you to securely capture, store and index all inbound and outbound email traffic in real-time. Once captured, these emails are stored in duplicate and geographically disparate locations, protecting data against physical loss and corruption.

## Image Protection

Employers have a professional obligation to minimize employee exposure to distasteful and offensive images coming to their inbox. ContentKeeper Mail includes a filter that scans images and converts their dataflow (shape, colour, texture etc.) to a digital signature which is then compared against known pornographic images and blocked if they are found to be similar. The email may then be either deleted or quarantined.

## Encryption

Email is a vital, but insecure, method of communication. Data is most vulnerable while it is in transit. CK-Mail's Managed Encryption Service provides open standard encryption using Transport Layer Security (TLS), a transparent mechanism for encrypting data on a peer-to-peer basis, such as between messaging servers. ContentKeeper also offers desk-to-desk encryption via public and private keys for added security.
