

# ContentKeeper Cloud Services

## Access Control. Threat Prevention. App Usage & Data Protection.

Securely connect users, devices, and apps, regardless of location, to protect your organization from internal and external threats.

ContentKeeper's multi-layered cloud security platform delivers security as a service, enabling secure cloud access to enterprise resources in a distributed user environment. With ContentKeeper Secure Cloud Gateway, organizations can easily scale protection and seamlessly transition towards a SASE future.

## ContentKeeper Secure Cloud Gateway

Innovative Approach to Cloud Security

### **Access Control**

#### Firewall as a Service (FWaaS)

Increase network visibility and control access across all ports and protocols.

#### **URL Filtering**

Ensure policy compliance, productivity and safety with category and policy-based management.

## **DNS Filtering**

Control and block access to known malicious sites for managed and non-managed devices in the cloud.

#### Zero Trust Network Access (ZTNA)

Eliminate security gaps by providing role and policy-based access to web content, cloud, and private Internet apps and resources.

## **Threat Prevention**

#### **SSL Inspection**

Find hidden threats with granular and selective inspection of SSL traffic at scale.

#### **Streaming Malware Defense**

Block known malware threats using high speed scanning technology and streaming malware intelligent feeds from Bitdefender.

#### **Predictive Malware Blocking**

## (Powered by Cylance)

Extend threat protection with artificial intelligence and machine learning to identify, predict, and block unknown targeted threats.

#### **Cloud Sandbox**

Block zero-day attacks by analyzing suspicious files for malicious behavior with reverse engineering and forensic level reporting.

## **App Usage & Data Protection**

## **Analytics/Reporting**

Provide real-time visibility, in-depth analytics, and comprehensive reporting of cloud application usage.

#### Microsoft® CASB Integration

Enforce compliance and better manage cloud application use with centralized visibility and reporting.

#### **SIEM Integration**

Ensure efficient incident response and compliance with consolidated analytics-driven reporting.

### **Cloud DLP**

Control DLP across users while ensuring productivity, by blocking actions only when needed with pre-defined policy dictionaries
